 <message key="manager.setup.journalArchiving">Journal Archiving</message>

- `<message key="manager.setup.lockssDescription">`  
 Open Journal Systems supports the `<a href="http://lockss.stanford.edu/" target="_blank">LOCKSS</a>` (Lots of Copies Keep Stuff Safe) system to ensure a secure and permanent archive for the journal. LOCKSS is open source software developed at Stanford University Library that enables libraries to preserve selected web journals by regularly polling registered journal websites for newly published content and archiving it. Each archive is continually validated against other library caches, and if content is found to be corrupted or lost, the other caches or the journal is used to restore it. `<br /><br />` Setting up LOCKSS support for Open Journal Systems does not need to take place until after publishing is fully underway, at which point follow these two steps:  
`</message>`
- `<message key="manager.setup.lockssRegister">`  
 Identify 6-10 libraries that will register and cache the journal. For example, turn to institutions where editors or Board members work and/or institutions already participating in LOCKSS. See `<a href="http://lockss.stanford.edu/about/users.htm" target="_blank">participating libraries</a>`. Use the prepared invitations for (i) `<a href="{ $lockssExistingArchiveUrl}" target="_blank">libraries participating in LOCKSS</a>` or (ii) `<a href="{ $lockssNewArchiveUrl}" target="_blank">libraries not yet participating in LOCKSS</a>`.  
`</message>`
- `<message key="manager.setup.lockssEnable">`  
 Enable LOCKSS to store and distribute journal content at participating libraries via a LOCKSS `<a href="{ $lockssUrl}" target="_blank">Publisher Manifest</a>` page. A LOCKSS license will appear in About the Journal under Archiving:  
`</message>`
- `<message key="manager.setup.lockssLicenses">`

  <h4>OJS Version {$version}</h4> <p>Thank you for downloading the Public Knowledge Project's
  <strong>Open Journal Systems</strong>. Before proceeding, please read the <a
  href="{ $baseUrl }/docs/README">README</a> file included with this software. For more
  information about the Public Knowledge Project and its software projects, please visit the <a
  href="http://pkp.sfu.ca/" target="_blank">PKP web site</a>. If you have bug reports or technical

```

support inquiries about Open Journal Systems, see the [support forum](http://pkp.sfu.ca/support/forum) or visit PKP's online [bug reporting system](http://pkp.sfu.ca/bugzilla/). Although the support forum is the preferred method of contact, you can also email the team at [pkp-support@sfu.ca](mailto:pkp-support@sfu.ca).

#### Upgrade

If you are upgrading an existing installation of OJS 2.x, [click here](#) to proceed.

#### Recommended system requirements

- [PHP](http://www.php.net/) >= 4.2.x (including PHP 5.x)
- [MySQL](http://www.mysql.com/) >= 3.23.23 (including MySQL 4.x) or [PostgreSQL](http://www.postgresql.org/) >= 7.1 (including PostgreSQL 8.x)
- [Apache](http://httpd.apache.org/) >= 1.3.2x or >= 2.0.4x or Microsoft IIS 6
- Operating system: Any OS that supports the above software, including [Linux](http://www.linux.org/), [BSD](http://www.bsd.org/), [Solaris](http://www.sun.com/), [Mac OS X](http://www.apple.com/), [Windows](http://www.microsoft.com/)

As PKP does not have the resources to test every possible combination of software versions and platforms, no guarantee of correct operation or support is implied.

Changes to these settings can be made after installation by editing the file `config.inc.php` in the base OJS directory, or using the site administration web interface.

#### Supported database systems

OJS has currently only been tested on MySQL and PostgreSQL, although other database management systems supported by [ADOdb](http://php.weblogs.com/adodb/) may work (in full or partially). Compatibility reports and/or code patches for alternative DBMSs can be sent to the OJS team.

#### Pre-Installation Steps

1. The following files and directories (and their contents) must be made writable:

- `config.inc.php` is writable (optional): `{ $writable_config }`
- `public/` is writable: `{ $writable_public }`
- `cache/` is writable: `{ $writable_cache }`
- `cache/t_cache/` is writable: `{ $writable_templates_cache }`
- `cache/t_compile/` is writable: `{ $writable_templates_compile }`
- `cache/_db/` is writable: `{ $writable_db_cache }`

2. A directory to store uploaded files must be created and made writable (see "File Settings" below).

#### Manual installation

Select **Manual Install** to display the SQL statements necessary to create the OJS database schema and initial data so that database installation can be performed manually. This option is useful when debugging installation problems, particularly on unsupported platforms. Note that this installation method will not attempt to create the database or any tables, although the configuration file will still be written with the supplied database settings.

</message>

- <message key="installer.upgradeInstructions">

#### OJS Version { \$version }

Thank you for downloading the Public Knowledge Project's **Open Journal Systems**. Before proceeding, please read the [README](#) and [UPGRADE](#) files included with this software. For more information about the Public Knowledge Project and its software projects, please visit the [PKP web site](http://pkp.sfu.ca/). If you have bug reports or technical support inquiries about Open Journal Systems, see the [support forum](http://pkp.sfu.ca/support/forum) or visit PKP's online [bug reporting system](http://pkp.sfu.ca/bugzilla/). Although the support forum is the preferred method of contact, you can also email the team at [pkp-support@sfu.ca](mailto:pkp-support@sfu.ca).

It is **strongly recommended** that you back up your database, files directory, and OJS installation directory before proceeding.

If you are running in <http://www.php.net/features.safe-mode>

target="\_blank">PHP Safe Mode</a>, please ensure that the max\_execution\_time directive in your php.ini configuration file is set to a high limit. If this or any other time limit (e.g. Apache's "Timeout" directive) is reached and the upgrade process is interrupted, manual intervention will be required.</p>

</message>

Authors are permitted and encouraged to post items submitted to this journal on personal or institutional websites, prior to and after publication (while providing the bibliographic details of that publication).  
</message>
- <message key="default.journalSettings.copyseditInstructions">  
The copyediting stage is intended to improve the flow, clarity, grammar, wording, and formatting of the article. It represents the last chance for the author to make any substantial changes to the text, as the next stage is restricted to typos and formatting corrections. The file to be copyedited is in Word or .rtf format and therefore can be easily edited as a word processing document. This set of instructions displayed here

proposes two approaches to copyediting. The one is based on Microsoft Word's Track Changes feature and requires that the copyeditor, editor and author have access to this program. A second system, that is software independent, has been borrowed, with permission, from the Harvard Educational Review. The journal editor is in a position to modify these instructions, so suggestions can be made to improve the process for this journal.

#### Copyediting Systems

**1. Microsoft Word's Track Changes**  
Under Tools in the menu bar, the feature Track Changes enables the copyeditor to make insertions (text appears in color) and deletions (text appears crossed out in color or in the margins as deleted). The copyeditor can post queries to both the author (Author Queries) and to the editor (Editor Queries) by inserting these queries in square brackets. The copyedited version is then uploaded and the editor is notified. The editor then reviews the text and notifies the author. The editor and author should leave those changes with which they are satisfied. If further changes are necessary, the editor and author can make changes to the initial insertions or deletions, as well as make new insertions or deletions elsewhere in the text. Authors and editors should respond to each of the queries addressed to them, with responses placed inside the square brackets. After the text has been reviewed by editor and author, the copyeditor will make a final pass over the text accepting the changes in preparation for the layout and galley stage.

**2. Harvard Educational Review**  
**Instructions for Making Electronic Revisions to the Manuscript**  
Please follow the following protocol for making electronic revisions to your manuscript:

- Responding to suggested changes** &nbsp; For each of the suggested changes that you accept, unbold the text &nbsp; For each of the suggested changes that you do not accept, re-enter the original text and **bold** it
- Making additions and deletions** &nbsp; Indicate additions by **bolding** the new text &nbsp; Replace deleted sections with: **[deleted text]** &nbsp; If you delete a sentence or more, please indicate with a note, e.g., **[deleted 2 sentences]**
- Responding to Queries to the Author (QAs)** &nbsp; Keep all QAs intact and bolded within the text. Do not delete them &nbsp; To reply to a QA, add a comment after it. Comments should be delimited using: **[Comment:** &nbsp; e.g., **[Comment: Expanded discussion of methodology as you suggested]**
- Making comments** &nbsp; Use comments to explain organizational changes or major revisions &nbsp; e.g., **[Comment: Moved the above paragraph from p. 5 to p. 7]** &nbsp; Note: When referring to page numbers, please use the page numbers from the printed copy of the manuscript that was sent to you.

#### An Illustration of an Electronic Revision

**The original "manuscript" file**  
Before making dramatic departures from the structure and organization of your original manuscript, please check in with the co-chairs of your piece. After you are finished with your revisions, rename the file from AuthorNameQA.doc to AuthorNameQAR.doc (e.g., from LeeQA.doc to LeeQAR.doc). Print out a hardcopy of your manuscript and mail it with a floppy disk containing the completely revised and renamed word processing file.

**Manuscript returned to the author with queries and suggestions**  
Before making dramatic departures from the structure and organization of **the manuscript that we are returning to you**, please check in with the **editors who are co-chairing** your piece. After you are finished with your revisions, rename the file from AuthorNameQA.doc to AuthorNameQAR.doc (e.g., from LeeQA.doc to LeeQAR.doc). Print out a hardcopy of your manuscript and mail it with a floppy disk containing the completely revised and renamed word processing file.

**[QA: In this paragraph, it might help to stress the importance of following carefully the instructions for making electronic revisions. Otherwise the editing process may be slowed considerably]**

**Revised manuscript sent back to HER**  
Before making dramatic departures from the structure and organization of the manuscript that we are returning to you, please check in with the editors who are co-chairing your piece. **Please understand that failure to follow the following instructions may significantly delay the publication of your manuscript.** After you are finished with your revisions, rename the file from AuthorNameQA.doc to AuthorNameQAR.doc (e.g., from LeeQA.doc to LeeQAR.doc). Print out a hardcopy of your manuscript and mail it with a floppy disk containing the **[deleted word]** revised and renamed word processing file. **[QA: In this paragraph, it might help to stress the importance of following carefully the instructions for making**

electronic revisions. Otherwise the editing process may be slowed considerably] [Comment: I added a sentence in response to your suggestion.]</b> <b>Notes:</b> &bull; Unbolded text indicates acceptance of the suggested changes to the first sentence &bull; Sentence added in response to QA. Bold text indicates addition of new text &bull; [deleted word] indicates deletion of "completely" &bull; Comment contains a reply to the editors' QA
